## PROJECTS

### CleanState - Web-Based Counseling & Rehabilitation Platform

Jan 2025

Technologies used : HTML, CSS , JS,PHP and My SQL

(Academic Project Contribution)

#### Description :

- Contributed to the design and development of CleanState, a web-based platform aimed at providing counseling and rehabilitation services to young individuals battling addiction. Built as part of a college project initiative to support a social cause through digital means.

#### Responsibilities :

- Developed front-end pages using HTML, CSS and JavaScript ensuring responsive user experience.
- Integrated user authentication system using PHP and MySQL for secure login and registration.

### Organ Link - Web-based Organ Donation Management System

Aug 2024

Technologies used : Python,JSON and My SQL

(Collaborative Academic Project)

#### Description :

- Co-developed Organ Link, a web-based platform aimed at optimizing organ donation workflows, including donor registration, organ matching, and hospital coordination. This project was part of a collaborative academic initiative focused on real world healthcare applications.

#### Key Contributions :

- Independently designed and implemented the MySQL database schema to store donor, recipient, and hospital data securely and efficiently.
- Collaborated on developing the backend using Python, handling organ match logic and system coordination.
- Integrated JSON for seamless client-server communication.
- Contributed to building user authentication for role-based access (admin, hospital, donor).

### Kuiz

June 2024

Technologies used : HTML , CSS and Javascript

(Mini Project )

#### Description :

- It is a Quiz website implemented features like real-time scoring and dynamic question loading to enhance the user experience.
